

2. HEALTHCARE POLICY, VENDOR & AUDIT READINESS

Create a shared readiness view across practitioner, vendor, and audit evidence before review work stalls.

THE CHALLENGE

Healthcare review work rarely moves in one clean handoff. Practitioner policies, attestations, vendor files, security evidence, and audit documents are often checked by different units at different times. Work slows when ownership and evidence status are not visible in one place.

BUSINESS OUTCOMES

- ✓ Clearer cross-unit follow-up
- ✓ Faster policy/vendor reviews
- ✓ Earlier missing-evidence visibility
- ✓ Fewer repeat review loops
- ✓ Better decision traceability

EXECUTIVE OVERVIEW

Two high-impact areas require immediate attention

- ISMS scope documentation gap aligns with active FDA enforcement signals.
- Supplier security absence creates confirmed NIS2 exposure risk.
- Change management procedures need follow-up review.

→ Assign ISMS scope and supplier security items to named owners this week.
